OFFICE Road Design

DATE July 27, 2009

FROM Brent A. Story, P.E, State Road Design Engineer

TO Genetha Rice-Singleton, Assistant Director of Preconstruction

SUBJECT Revised Project Concept Report

The proposed project would widen Patrick Mill Road/CR 93 from a two-lane highway to a four-lane divided highway with a 24-ft raised median from Tom Miller Road to approximately 1,000-ft south of Burson Maddox Road. The roadway would continue north on new location, bridge over SR 8, the CSX railroad track and Bankhead Highway, cross Pearl Pentecost Road and connect SR 211. The total length of the project would be approximately 5.0 miles. The project would also include a full-diamond interchange at SR 316 and connector roadways from the West Winder Bypass to SR 8 and to Bankhead Highway.

The alignment of the proposed West Winder Bypass was revised to tie into SR 211 approximately 3,000-ft south of the original alignment. The alignment was moved to prevent impacting a historic resource.

West Winder Bypass alignment was revised to curve south and cross Pearl Pentecost Road and continue parallel to Cedar Creek through property owned by Barrow County and then tie into SR 211 at milepost 2.14.

The revised concept as presented herein and submitted for approval is consistent with the Regional Transportation Program (RTP) and/or the State Transportation Improvement Program (STIP).

Angela T. Alexander
State Transportation Planning Administrator

REVISED PROJECT CONCEPT REPORT

Need and Purpose:
The need for the proposed projects is to provide a bypass route on the west side of the city of Winder from SR 316 to SR 211 and to construct a grade-separated railroad crossing at the intersection of the West Winder Bypass and SR 8. The purpose is to alleviate the percentage of trucks utilizing minor arterial routes and to reduce congestion and accident rates along Patrick Mill Road, SR 8, SR 211 and Pearl Pentecost Road.

Planning Background and Project History
In the 1990's, commercial and industrial land uses began to develop along SR 8, Bankhead Highway and Patrick Mill Road. The west side of the city of Winder includes the West Winder Industrial Park, business centers and manufacturing plants. SR 8 and Bankhead Highway parallel the CSX railroad that passes through the City of Winder. Industrial and commercial traffic from this area of Barrow County primarily travel to and from the interstate system via SR 316 and SR 211. This travel pattern requires that the industrial truck traffic from this area use an at-grade railroad crossing and travel on residential collector roadways to reach SR 211 or travel through the Downtown area of the city of Winder. Currently, the only grade-separated railroad crossing for the city of Winder is the Center Street underpass located approximately 3 miles east of Patrick Mill Road. To address this need, in the year 2000, project CSSTP-0006-00 (326) Phase I, P.I. Number 0006326 was established. This project, slated for construction in 2012, includes a railroad overpass on the west side of Winder from Patrick Mill Road at Mathews School Road to Pearl Pentecost Road. This project was further expanded to Phase II of CSSTP-0006-00 (327), P.I. Number 0006327. Phase II is currently slated for long range construction and includes the Patrick Mill Road widening from SR 316 to the railroad overpass and new roadway construction from Pearl Pentecost Road to SR 211. However, now the two projects are programmed for design and construction under project number CSSTP-0006-00 (327), P.I. Number 0006327 as the West Winder Bypass.

The West Winder Bypass project would widen Patrick Mill Road/CR 93 from a two-lane to a four-lane divided highway with a 24-foot raised median from Tom Miller Road to approximately 1,000 feet south of Burson Maddox Road. The roadway would continue north on new location, bridge over SR 8, the CSX railroad track and Bankhead Highway, cross Pearl Pentecost Road and connect to SR 211. The total length of the project would be approximately 5.0 miles. The project would also include a full-diamond interchange at SR 316 and connector roadways from the West Winder Bypass to SR 8 and to Bankhead Highway.

Land Use Trends Impacting Transportation
The current land use surrounding the intersection of the Patrick Mill Road at SR 8 includes primarily industrial, manufacturing and commercial businesses. However, along Patrick Mill Road are several side streets consisting of residential subdivisions, schools and churches. The land use trend of maintaining industrial and commercial businesses in this area with residential land uses being developed on the side streets of Patrick Mill Road between SR 316 and SR 8 is reflected in the Barrow County Future Land Use Map (1999-2018).

Logical Termini

The logical southern terminus of the proposed West Winder Bypass would occur at the intersection of Tom Miller Road relocated approximately 1,000 feet south of SR 316. At this intersection, 42% of the traffic turns left onto Tom Miller Road. Tom Miller Road has two schools and there are plans to construct a third school. Tom Miller Road intersects with SR 81 near the Walton County line. Consequently, residential commuters and commercial traffic from the north side of SR 316 travel to and from Tom Miller Road.

The logical northern terminus of the proposed project is at the intersection with SR 211. It's at this intersection that West Winder Bypass joins SR 211 traffic from downtown Winder. There is a project listed on the 2030 Regional Transportation Plan that includes the widening of SR 211 from the West Winder Bypass to the I-85 interchange (BA-013), consequently, this intersection was chosen as the logical northern terminus.

Annual Daily Traffic Volumes and Levels of Service

The existing roadway of SR 8 near the CSX railroad crossing is operating at a level of service "D" under current peak hour conditions and Patrick Mill Road currently operates at level of service "C". Level of service (LOS) is a qualitative measurement of traffic flow, which ranges from "A" (unimpeded, free-flowing traffic) through "F" (virtual gridlocked traffic). These roadways currently serve local and commercial traffic in the area. The commercial, industrial and residential land uses along Patrick Mill Road and SR 8 contribute to the 6,630 vehicles per day (vpd) and 16,840 vpd, respectively on these existing facilities. Trucks contribute 34% of the 24-hour traffic volume on SR 8 and 22% of the traffic on Patrick Mill Road.

The average traffic growth rate in this area of Barrow County was determined to be 4.8% per year. However, this growth rate would not be sustained on the state routes, which are the primary routes of diversion. The state routes were increased according to their own average traffic growth rates of 2.5% for SR 211 and 2.6 % for SR 8. As a result of these traffic growth rates, it is projected that traffic will more than double by the year 2029. The West Winder Bypass project is proposed to relieve traffic on these facilities as shown in the table below.

Roadway	Current 2005 AADT (vpd)	LOS	2029 No-Build AADT (vpd)	LOS	2029 Build AADT (vpd)	LOS
Patrick Mill Rd	6,630	C	20,500	F	24,900	C*
SR 8	16,840	D	31,200	F	20,200	D
SR 211	13,860	D	25,000	F	16,200	D
Pearl Pentecost Rd	2,985	B	9,200	C	6,200	B

* Patrick Mill Road would be widened to four lanes in the build condition.

Patrick Mill Road and SR 8 are currently two-lane roadways that are inadequate to handle the projected industrial/commercial traffic of the west side of Winder. Traffic would be diverted

from SR 8, SR 211 and Pearl Pentecost Road to the West Winder Bypass, thus allowing these facilities to operate at acceptable levels of service.

Intersection levels of service were determined at each of the major intersections of the project and are shown in the table on the next page. Existing intersection levels of service range from A to D with the exception of Patrick Mill Road at Tom Miller Road/Fairlong Way, which operates at LOS F during the A.M. peak hour. This intersection may need to be signalized due to the number of left turns from Patrick Mill Road to Tom Miller Road. The projected levels of service are anticipated to decline to LOS F at all of the major intersections by the 2029 design year if no action is taken. Under the build condition, the proposed major intersections would operate at LOS D or better in the design year (2029).

Summary of HCS Analysis Results

Intersections	Existing Year 2005		No-Build Year 2029		Proposed Design Year 2029

* For unsignalized intersections, LOS is given for minor street approach.

Safety Improvements

An inventory of crash data from 2001 to 2003 is provided in the table on the next page. The table lists the total number of accidents and injuries coded to roadway segments of Patrick Mill Road, SR 8 and SR 211 that are improved by the West Winder Bypass project. Two fatalities were recorded during 2001 and 2003 along a short section of SR 8 at or near Patrick Mill Road. Additionally, there was one fatality at the intersection of Patrick Mill Road at SR 316 in 2001.

Crash Data
Comparison to Statewide Rates for Major Collectors

Roadway Segment	Year	No. Of Accidents	Accident Rate *(Statewide)*	No. Of Injuries	Injury Rate *(Statewide)*	No. Of Fatalities	Fatality Rate *(Statewide)*
SR 8 (1.71 mi)	**2001**	20	289 *(185)*	15	217 *(98)*	1	14.5 *(2.28)*
	2002	30	332 *(195)*	6	66 *(104)*	0	00.0 *(2.37)*
	2003	42	400 *(211)*	15	143 *(110)*	1	9.5 *(2.95)*
SR 211 (3.46 mi)	**2001**	97	488 *(185)*	32	161 *(98)*	0	00.0 *(2.28)*
	2002	88	541 *(195)*	29	178 *(104)*	0	00.0 *(2.37)*
	2003	79	451 *(211)*	29	166 *(110)*	0	00.0 *(2.95)*
Patrick Mill Rd (2.22 mi)	**2001**	28	606 *(185)*	13	281 *(98)*	1	21.6 *(2.28)*
	2002	39	802 *(195)*	11	226 *(104)*	0	00.0 *(2.37)*
	2003	47	921 *(211)*	24	470 *(110)*	0	00.0 *(2.95)*

The results indicate that Patrick Mill Road, SR 8 and SR 211, all currently have accident, injury and fatality rates above the average rates as compared to similar major collectors statewide. There were seven angle collisions and three rear-end accidents at the intersection of SR 8 and the at-grade railroad crossover. One of these accidents resulted in a fatality. Proposed construction of the West Winder Bypass would result in a decrease in traffic using the SR 8 at-grade railroad crossover and decrease traffic on SR 211. Consequently, the West Winder Bypass project would reduce the risk of various common accidents, specifically rear-end and angle collisions at intersections and at the railroad crossing.

In summary, the proposed construction of the West Winder Bypass would correct the existing roadway deficiencies, improve traffic safety and increase the capacity of the roadway to facilitate the projected traffic growth.

- GDOT Project M003152 – SR 211 from SR 316/US 29 to SR 11/Statham Road
- GDOT Project s007743 – Three streets in the City of Winder

Project location: The proposed West Winder Bypass is located in Barrow County west of the city of Winder. The total length of the project is approximately 5 miles. The proposed project is located along existing Patrick Mill Road from milepost 0.81 to 2.71. The project then continues on new location crossing Pearl Pentecost Road and ties into SR 211 at milepost 2.14.

Description of the approved concept: The proposed project would widen Patrick Mill Road/CR 93 from a two-lane to a four-lane divided highway with a 24-foot raised median from Tom Miller Road to approximately 1,000 feet south of Burson Maddox Road. The roadway would continue north on new location, bridge over SR 8, the CSX railroad track and Bankhead Highway, cross Pearl Pentecost Road and connect to SR 211. The total length of the project would be approximately 5.0 miles. The project would also include a full-diamond interchange at SR 316 and connector roadways from the West Winder Bypass to SR 8 and to Bankhead Highway.

Federal Oversight: Full Oversight ( ), Exempt(X), State Funded( ), or Other ( )

Functional Classification: Rural Major Arterial

U. S. Route Number(s): N/A **State Route Number(s):** N/A

Traffic (AADT) as shown in the approved concept:
Base Year (2009): 18,100 Design Year (2029): 26,700

Proposed features to be revised:
The alignment of the proposed West Winder Bypass was revised to tie into SR 211 approximately 3,000 feet south of the original alignment. The alignment was moved to prevent impacting a historic resource.

Describe the revised feature(s) to be approved: West Winder Bypass alignment was revised to curve south and cross Pearl Pentecost Road and continue parallel to Cedar Creek through property owned by Barrow County and then tie into SR 211 at milepost 2.14.

Updated traffic data (AADT):
Base Year (2009): 18,100 Design Year (2029): 26,700

Programmed/Schedule:
P.E. 2005 R/W: Long Range Construction: Long Range

Revised cost estimates:

1. Construction	$ 42,116,513.66
2. Right-of-way	$ 42,750,000.00
3. Utilities	$ 2,600,000.00
Total	$ 87,466,513.66

Is the project located in a Non-attainment area? ___X___ **Yes** _____**No.** This project conforms to the Transportation Improvement Plan. It is listed as project BA-005 and described as reconstruction/new construction from 2 to 4 lanes.

Recommendation: Recommend that the proposed revision to the concept be approved for implementation.

RE: West Winder Bypass, CSSTP-0006-00(327), PI 0006327
Utility Relocation Costs

Dear Mr. McCook,

The reimbursable utility cost of $2,000,000 in the Concept Report was based on two assumptions. The first assumption is that when the profile is developed, the profile grade of the West Winder Bypass will NOT require the 36" and 40" gas pipelines belonging to Colonial Pipeline to be relocated, and these lines will only have to be concrete encased. This cost, based on some previous costs, would be approximately $1,250,000 to do this work. The second assumption is that there will only be two 230kv electric transmission towers and two 115kv transmission towers relocated where the WWBP crosses Georgia Power Transmission's easement. This will account for the remaining $750,000 in utility relocation costs.

These costs could increase to more than $5,000,000 once the profile is finalized should Colonial have to lower the two gas lines. Some of the historical costs that I have be given for relocating/lowering the pipelines could be anywhere between $3,000,000 and $5,000,000. Also, if the grade requires more than two of each type of tower to be relocated in GPC easement, these costs could also increase. Based on older projects, the transmission tower relocation costs, historically are approximately $250,000/tower for the 230kv towers and $125,000/tower for the 115kv towers.

If you have any questions please let me know.

Sincerely,

Chris Parypinski
Project Manager
